

PAC Fork & Redemption Guide

The current total supply of PAC will be reduced, providing a whole host of benefits. The current total supply of 100 trillion PAC with 3.5 trillion having already been mined into circulation will be reduced via an RCO (Redemption Coin Offering) offering one new PAC for each 1,000 existing PAC, with each new PAC worth 1,000 times the original PAC.

This will reduce the total supply to 100 billion with 3.5 billion in circulation. The amount of data in the blockchain will shrink dramatically, resulting in wallets syncing faster, thus allowing the chain to be more easily installed across the globe.

This also makes PAC more attractive to new exchange listings, which is our focus for 2018.

PUBLIC REDEMPTION GUIDE

Public redemption for new PAC owners will begin on **March 1st**.

STEP ONE

Ensure you have **both** PAC wallets installed from <https://wallets.paccoin.net/>

STEP TWO

Remove your old 'PACcoins' from any exchanges and deposit them into the old PAC wallet. **DO NOT SEND OLD PAC TO THE NEW WALLET.**

STEP THREE

Once your old 'PACcoins' are safely inside the old wallet, your old 'PACcoins' must be sent to one of our secure redemption addresses found **ONLY ON** www.paccoin.net - after a short while your new \$PAC will be sent back to your new PAC wallet address supplied by you.

MASTERNODE REDEMPTION GUIDE

Early redemption for Masternode owners will begin on **February 1st**.

Each masternode requires **500 million old PACcoins**. You may redeem multiple masternodes if you wish.

SHARED MASTERNODE POOLS

Masternode sharing pools will be made available through <https://www.pacfyle.net> to investors who wish to share a masternode with other community members.

Redemption support

It is important that people save their transaction ID as proof that coins were sent and to make sure that the **support team** can help you recover your coins in the unlikely event an error occurs.
